What distinguishes Herringbone Flooring from other flooring?

CREATIVE PATTERN WITH TRADITIONAL GOOD LOOKS

Herringbone is a multi-layer floating flooring which allows classic timber herringbone patterns. Upgrade any residential or commercial project with Herringbone designs or combine with Crete tiles for impactful flexible designs.

100% WATERPROOF

The commercial grade ISOCORE layer is 100% waterproof. ISOCORE delivers rigidity and strength yet is lightweight and dimensionally stable over large areas. Project owners and specifiers can rely on its outstanding performance for hospitality, education, offices, retail and other high use interiors.

EASE OF INSTALL WITH DROPLOCK 400™ SYSTEM

The robust Droplock 400™ system enables previously unavailable 'corner to corner' installation. The integrated acoustical underlay facilitates a fast and easy install, reducing costs and providing outstanding in room and transfer acoustics.

CERAMIC BEAD OVERLAY WITH ULTRA-FRESH™

An overlay of microscopic ceramic beads combined with Ultra Fresh™ anti-microbial treatment provides superior wear resistance and controls the growth of unwanted microbes and odours.
